Mac/Linux Dev

Hi friends, so you are looking to contribute, heres what you'll need.

Requirements

Make sure you have the following commands available, you can check with the following.

```
> which docker-compose
/usr/local/bin/docker-compose
> which docker
/usr/local/bin/docker
```

See install guides here if you are missing any of the two:

- docker
- docker-compose

Dev Start

From the project root, run `./scripts/dev-start.sh`

See dev script here: https://github.com/YACS-RCOS/yacs.n/blob/master/scripts/dev-start.sh
